### DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 8-9, 11, 13-15, 22-24 and 28-29 are rejected under 35 U.S.C. 102(e) as being anticipated by Jeong et al(6,717,468B1).

Jeong et al disclose a high slew rate amplifying circuit for a TFT-type of LCD system comprising an LCD panel(100), a plurality of source drivers(130) connected to the panel, each of the source drivers including an output buffer; each output buffer including an operational amplifier(see figure 4), a pull-up transistor(MO12), a pull-down transistor(MO11), a control circuit(MO4, MO7), a high-part amplifying sub-circuit(MO1, MO2, MO3, MO5), a low-part amplifying sub-circuit(MO6, MO8, MO9, MO10) wherein the low part and the high part amplifying circuits have voltage follower configuration including a plurality of transistors which all function as claimed.

3. Claims 2-7, 10, 12, 16-21 and 25-27 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Imai et al, Itakura et al, Akita et al, Tamagawa, Fukuo, Griffin,

Art Unit: 2629

Kim, Chung and Hector et al are made of record to show various types of output amplifier circuits for enhancing slew rate of the amplifier output signal.
